DATA ANALYTICS

Projects

Trader Performance vs Market Sentiment

[View on GitHub ↗](#)

Analysed 250+ real Hyperliquid trades against the Bitcoin Fear/Greed Index (Feb 2024 – Mar 2025). Merged datasets by date, engineered daily metrics including PnL, win rate, trade frequency, long/short ratio, and drawdown proxy. Discovered significantly higher profits on Greed days vs Fear days through statistical t-tests. Applied KMeans clustering to segment trading days and built a Gradient Boosting model to forecast next-day profitability.
